Subject: Everything you'll need to know from MLH at HackTheBurgh 💻
Date: Friday, 6 November 2026 at 17:01:08 GMT+00:00
From: Major League Hacking
To: Viktor Sharha

You don't often get email from hi@mlh.io. Learn why this is important

Hey, Viktor --

It's awesome to hear that you're interested in attending HackTheBurgh.

At Major League Hacking (MLH) it's our mission to empower hackers like you and we're bringing everything you need to build something amazing!

We know you love prizes and we brought a ton that you can win this weekend by completing challenges & using new tech.

Google Cloud

Best Use of Gemini API

⭐ MLH Swag Kits ⭐

It’s time to push the boundaries of what's possible with AI using Google Gemini. Check out the Gemini API to build AI-powered apps that make your friends say WHOA. So, what can Gemini do for your hackathon project?

- Understand language like a human and build a chatbot that gives personalized advice
- Analyze info like a supercomputer and create an app that summarizes complex research papers
- Generate creative content like code, scripts, music, and more

Think of the possibilities… what will you build with the Google Gemini API this weekend?

IIElevenLabs

Best Use of ElevenLabs
⭐ Wireless Earbuds ⭐

Deploy natural, human-sounding audio with ElevenLabs. Create realistic, dynamic, and emotionally expressive voices for any project, from interactive AI companions to narrated stories and voice-enabled apps. ElevenLabs will empower you to build rich, immersive experiences without the need for actors or complex audio production, using simply the power of AI.

Integrate fully autonomous audio experiences into your hack with ElevenLabs and give your project a voice, along with giving your team the chance to win some wireless earbuds!

Promo Code: Claim your ElevenLabs Q4 2025 - Q4 2026 promo code now!

Entire

Best Use of Entire
⭐ Mini Portable Projector ⭐

Entire is the Git forge for agent-human collaboration. From syncing your sessions and prompts to your Git history, to hosting code and replacing the Pull Request with Trails, Entire are reimagining code hosting and collaboration for the agent era.

Ready to build faster with AI without burning through tokens or losing context? This challenge

is all about building smarter AI workflows. To qualify, your project should leverage as many of Entire's core capabilities (Sessions, Graph, and/or Brain) as possible.

Your project should lean on Sessions for context and memory and entire-graph for codebase mapping:

- Sessions (Shared Memory): Save your AI agent sessions as instant checkpoints and push them to your team. Teammates or other agents can jump in instantly and pick up right where you left off with zero context loss.
- Graph (Codebase Mapping): Generate a visual map of how your codebase fits together. Using entire graph search instead of letting agents blindly search files to cut token usage by up to 71%!
- Brain (Persistent Reasoning): Combine your session data and Graph insights into persistent project knowledge. Agents can query past decisions and architectural lessons through the CLI or MCP so they don't repeat mistakes or undo working code.
- Trails (Code review): Assign you or a teammate's agent a task via Trail (Entire's issue/PR combo primitive), the agent works on it, and then let your agent review the code change: does the code change match the intent? Should it merge? Let Entire Trails help you decide!

We're looking for teams that use Entire to create seamless human-AI collaboration, maintain clean code history, and show measurable token efficiency. Build something awesome, keep your agents on track, and show us how Entire powers your workflow!

Promo Code: Claim your Entire Q4 2026 - Q3 2027 promo code now!

Best Use of Solana
⭐ Unruggable Hardware Wallets ⭐

The world of development is evolving fast and Solana is leading the charge with a network built to handle all of your infrastructure needs. Forget high fees and slow confirmations, it's time to build applications that are fast, efficient, and scalable.

Harness Solana's core advantages like blazing fast execution and near-zero transaction costs to make your hackathon ideas become real world projects. With Solana, the possibilities are endless.

- Create a game, social app, or consumer product that relies on instant, high-frequency transactions.
- Design a sophisticated trading, lending, or decentralized exchange (DEX).
- Build a prototype for supply chain, identity, or payments that can handle massive, real-

world volume.

Show us how you can innovate with Solana for a chance to win Unruggable Hardware Wallets for you and each member of your team!

Best Use of Tiger Data
⭐ Stream Deck Mini ⭐

Building high-performance apps under hackathon deadlines shouldn't mean spending half your weekend configuring complex databases or learning obscure query languages. Tiger Data extends PostgreSQL to give student developers an ultra-fast foundation for real-time data, time-series metrics, and complex analytics.

Why build with Tiger Data this weekend?

- Standard SQL Power: Query massive datasets instantly using the SQL you already know, with no complex NoSQL aggregation pipelines required.
- Unified Data Stack: Store relational user profiles and high-frequency metric streams side-by-side in a single database.
- Instant Dashboards: Serve lag-free, real-time frontend charts using pre-computed Continuous Aggregates.
- 90%+ Data Compression: Store millions of events on free-tier cloud instances without running out of disk space.

Whether you're building real-time IoT monitoring, AI-driven analytics dashboards, or financial prediction engines, show us how Tiger Data powers your project. The team that demonstrates the most innovative, impactful, and performance-driven use of Tiger Data will take home some great prizes!

Best Use of Vultr

⭐ Assorted Prizes ⭐

Vultr empowers hackers to bring their high-performance projects to life instantly; providing everything from the speed of one-click deployment and scalable cloud compute, to specialized Vultr Cloud GPUs that can power AI-driven applications. We want you to push the limits of what can be built when infrastructure is no longer the bottleneck!

Sign up for a Vultr account today and claim your free cloud credits! Take your next hack to the cloud with Vultr for a chance to win some awesome prizes for you and your team!

Best Use of Auth0
⭐ Wireless Headphones ⭐

Auth0 wants your applications to be secure! Why spend hours building features like social sign-in, Multi-Factor Authentication, and passwordless log-in when you can enable them through Auth0 straight out of the box? You can also secure your AI applications with Auth0 for AI Agents.

Auth0 is free to try, doesn't require a credit card, and allows for up to 7,000 free active users and unlimited log-ins. Make your new account today and use any of the Auth0 APIs for a chance to win a pair of wireless headphones for you and each member of your team!

Google Cloud

AI tools and APIs give hackers super powers. Join us for our **Intro to Google AI Studio** workshop at HackTheBurgh to learn how you can leverage AI in your hack this weekend. Listen during the Opening Ceremony or come visit the MLH table to learn where and when it'll take place.

Google AI Studio is the fastest way to start building with the Gemini family of multimodal generative AI models. Google AI Studio allows you to try out Gemini's massive token context window, grab an API key in seconds, and experiment on prebuilt prompts.

Preregister for the workshop now!

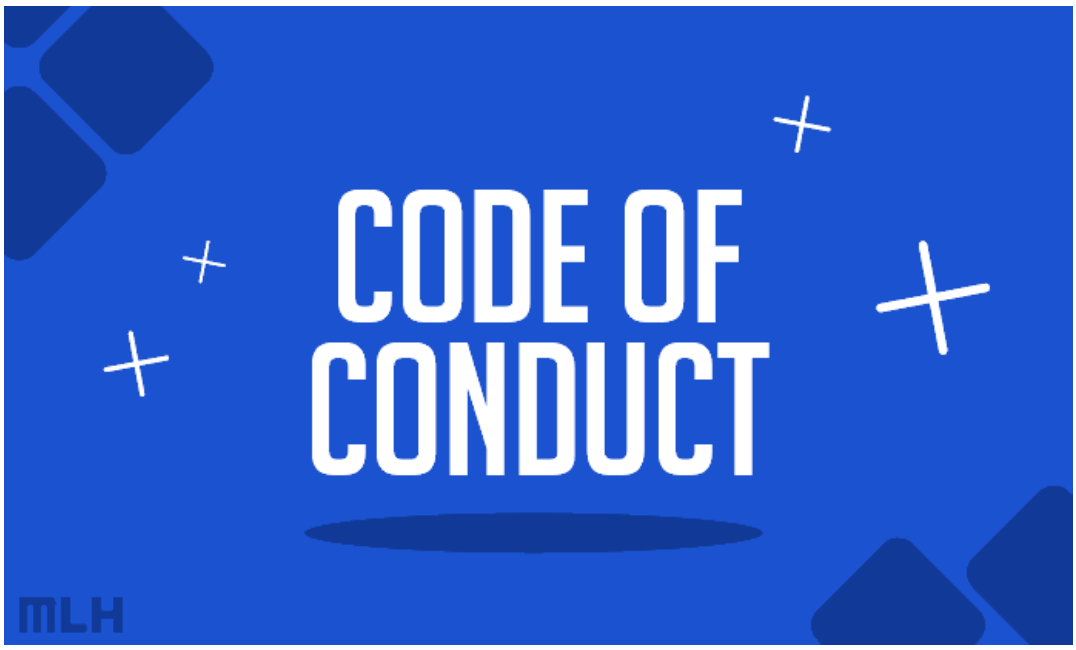

GitHub Copilot

Want to make your hacks better and faster? With the help GitHub Copilot, you can cut your development time in half! This weekend, we'll have an entire mini-event dedicated to showing

you how to start hacking with GitHub Copilot. Be sure to signup for the GitHub Student Developer pack for free access to GitHub Copilot.

Step into the Flight Deck with Copilot!

All participants agree to respect and abide by the MLH Code of Conduct.

If something makes you uncomfortable, get in contact with the MLH rep on-site or use one of these methods:
